

**Committee of Adjustment
Summary of Comments for June 22, 2026
For Application B04-26
16 First Street**

The below summary of comments provides information and any requested conditions of approval from circulated Departments and external agencies.

CITY OF ORILLIA

TO: Committee of Adjustment – Hearing of June 22, 2026
FROM: Planning Division
DATE: June 16, 2026
FILE NO: Application for Severance B04-26
APPLICANT: Amarjot Thiara
OWNER: 16 First Development Inc.
SUBJECT PROPERTY: 16 First Street

This is a Supplementary Memo to the staff report dated May 12, 2026 regarding the above-referenced application. The recommendation in this Supplementary Memo supersedes the recommendation made in the previous staff report as a result of subsequent Site Inspections undertaken by City staff.

Recommendation:

THAT Application B04-26 be deferred to a future meeting date, to be determined, for the following reasons:

1. Notwithstanding the recommendation in the original staff report dated May 12, 2026, public comments prompted staff to conduct further site visits (May 28 and June 11) and investigation regarding the proposed development.
2. Staff would like to hear the concerns raised by neighbouring owners at the June 22nd public hearing and have time to consider them after the hearing.

3. Additional conditions may be required to protect both the neighbourhood and the future residents of the subject property from adverse impacts. Staff will require more time to research and draft suitable conditions.
4. The number and complexity of the conditions ultimately developed may be of a nature more suited to a Plan of Subdivision than a Consent. Section 53(1) of the *Planning Act* states that the Consent approval authority “may give a consent if satisfied that a plan of subdivision of the land is not necessary for the proper and orderly development of the municipality”. At the time of writing this supplementary memo, staff was still evaluating whether a Plan of Subdivision is required to provide proper and orderly development as set out the City’s Official Plan Consent Policy 7.1.12.1 a) given the number of plans and studies likely to be required to ensure the proposed development results in good land use planning.

Background:

- Application B04-26 was originally scheduled for hearing at the May 20th, 2026 virtual hearing of the Committee of Adjustment.
- At the May 20th hearing, the Committee of Adjustment reviewed a request for an in-person hearing on this matter and made the determination that significant prejudice would be caused to various parties by holding a virtual hearing.
- The matter was rescheduled for an in-person hearing on June 22.
- At the time of the May 20th hearing, the Applicant was not the registered owner of the subject property. As a condition of the deferral of the application to June 22nd, it was required that the Applicant provide the Secretary-Treasurer with satisfactory evidence that he was the registered owner of the property on or before June 4th.
- On June 4th, the Applicant provided a copy of a registered Transfer to the Secretary-Treasurer confirming that his company became the registered owner of 16 First Street on June 4, 2026. The City has received the necessary authorizations to allow the Applicant to continue to act as agent for purposes of this application.
- Notice of the June 22nd in-person hearing was circulated on June 8, 2026. The Notice erroneously contained the name of the previous owner instead of the new owner.
- An Amended Notice of Hearing was hand-delivered on June 11, 2026 to properties within the 60m circulation located on First Street and Goldie Drive, and mailed to property owners whose addresses were not on First Street or Goldie Drive also on June 11, 2026, to advise that the property ownership as of June 4, 2026 transferred from the previous property owner Sean Cudmore to “16 First Development Inc.”

Analysis:

Further to the City receiving numerous comments and objections from neighbouring owners, Planning staff undertook site inspections on May 28, 2026 and June 11, 2026.

- On May 28, 2026 Planning staff completed a further site inspection of the neighbourhood and observed the following:
 - First Street has a narrow roadway with open ditches and no sidewalks; however the road allowance is 20m wide which is the minimum required for a Local Road.
 - The general grade of the lands slopes downward towards Laclie Street from the properties on Goldie Drive and Second Street to a large drainage ditch within the Laclie Street road allowance that collects the stormwater flows from the area.
 - There is a significant grade differential between the subject property (16 First Street) and the abutting property to the south (12 First Street), which may result in the need to install retaining walls on the subject property as part of the future development.
 - There are numerous large, mature trees scattered on the subject property with more trees along the property boundaries along the north and south lot lines.
 - Various pictures of the site were taken(Schedule “B”).
- Planning staff conducted a further site inspection on June 11, 2026 which focused on the property to the south of the subject property (12 First Street) which has a municipal drainage easement for conveying stormwater from the neighbouring area to the open ditches on Laclie Street. Refer to pictures (Schedule “B”).

Drainage/Stormwater Management

Following circulation of the Notice of Hearing, the owner of the property at 12 First Street, which is the immediately abutting property to the south of the subject property, had contacted staff with concerns that the drainage swale on his property would be inadequate to handle any additional stormwater generated by the proposed redevelopment.

The property at 12 First Street is subject to a drainage easement in favour of the City, established in 1982 for the purposes of “*an aboveground and underground storm water drainage system*” benefitting “*First Street and Goldie Drive*” (Registered Instrument RO766232). The easement is over the lands highlighted in pink, being Part 4 on Plan 51R-11003 (Figure 1). Engineering staff have confirmed that no existing underground stormwater drainage system is in place; it is an above ground stormwater drainage system (i.e. ditch).

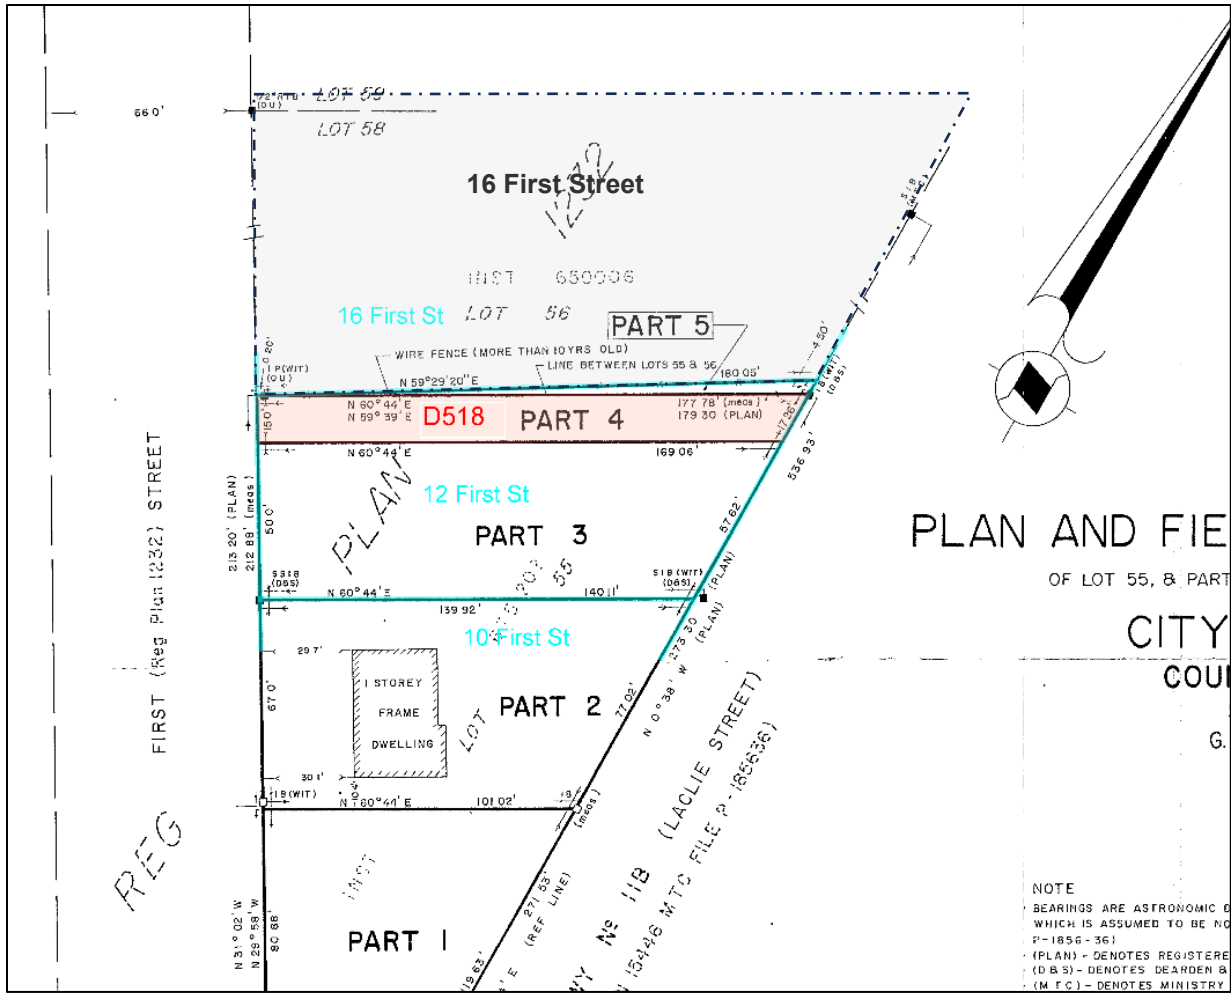

Figure 1: Location of Drainage Easement Benefitting First Street and Goldie Drive

Planning staff had discussions with the owner of 12 First Street both on the telephone and during the follow-up site inspection on June 11, 2026. The owner of 12 First Street indicated to Planning staff that the existing municipal ditch was barely able to keep up with current stormwater flows as it is “not deep enough”. Planning staff suggested that the owner of 12 First Street contact operations staff to inspect the ditch and take appropriate corrective action.

Staff from the City’s operations division of the Environment and Infrastructure Services Department undertook a site inspection on Friday, June 12, 2026 regarding the City’s municipal drainage easement which is located adjacent to the subject property to the south. The City’s Environmental Compliance/QMS Coordinator confirmed the following:

“Our plan is to re-define the drainage ditch to ensure the water is properly conveyed to the ditch on Laclie St. This should help keep the flow within the easement and prevent flooding into the backyard of 12

First St. It should also be able to handle the water coming from the proposed development.

There is an existing culvert under First St that discharges into the easement, however, there does not appear to be any underground infrastructure within the easement itself. The culvert was inspected and does not have any obstructions.”

Planning staff also asked the City’s Development Coordinator in the Development Service and Engineering Department to attend the site and make an assessment regarding the condition of the drainage swale and the impacts of the redevelopment of 16 First Street on the overall stormwater management in the neighbourhood.

The City’s Development Coordinator attended the site on June 11, 2026. Based on that inspection staff provided the following comments:

- Current private underground drainage infrastructure on 16 First Street directs flow to the neighbouring property at 12 First Street. It is assumed that this infrastructure will be removed and the development will ensure that all drainage will be self contained and directed to municipal drainage facilities only.
- The proposed development may require the construction of retaining walls.
- The existing grades of the site will be challenging. Lot grading plans will be required and shall follow the City of Orillia’s Engineering Design Criteria.
- Road surface flows enter the property via the driveway due to the area grading, the lot grading and stormwater management report shall demonstrate the intent to capture these flows and protect proposed dwellings.
- Driveways grades and design shall conform to specifications in the Engineering Design Criteria / Entrance Permit.
- An Erosion and Sediment Control Plan will be required as construction activities may impact the adjacent municipal swale and ditch
- Road restoration details are to be provided on future site servicing plans.

Trees/Landscaping

During the recent site visit staff also noted the presence of mature trees on the subject property which would likely be removed as a part of the redevelopment of the lot. Additionally, there are trees located on the adjacent properties near the common lot lines that may be impacted by the regrading of the subject property to facilitate the proposed development.

With respect to the removal of trees, the City’s Tree Conservation By-law (as set out in Chapter 370 of the City’s Municipal Code) does not apply to the redevelopment of this property for the following reasons:

1. The subject property is less than 0.5 ha in size. Properties less than 0.5 ha in size are not required to obtain a Tree Permit prior to the removal of trees on private property, as set out in the Permit Exemption subsection 370.4.1. a) of the Tree Conservation By-law.
2. Development agreements entered into after December 31, 2002 are not subject to the City's Tree Conservation By-law as set out in subsection 370.4.2 d) of the Tree Conservation By-law.

Given the complexity of the subject property with respect to terrain, stormwater overland flow, abutting drainage concerns, trees, open ditches, narrow roadway, etc., staff are still considering whether this application would be better suited for a Plan of Subdivision application rather than a Consent application. Staff recommends the Committee of Adjustment provide staff in both the Environment and Infrastructure Services and the Development Services and Engineering Departments' more time to consider whether a Plan of Subdivision ought to be required to ensure orderly and proper development of the subject property.

Additional Recommended Conditions

Drainage/Stormwater Management/Grading

Staff recommend that a Stormwater Management Plan, Lot Grading Plan and an Erosion and Sediment Control Plan be prepared to the satisfaction of the City and incorporated by reference in the development agreement. At this time, further research and discussion is required to ensure that the conditions imposed are adequate to protect existing and future residents from any adverse impacts.

If it is determined that retaining walls will be required to support the proposed development, then the Retaining Walls must be designed by a qualified professional engineer to the City's satisfaction.

Species at Risk Study/Tree Preservation Plan/Landscaping Plan

Planning staff recommends that a Species At Risk Study be completed by the applicant to ensure consistency with the Provincial Planning Statement 2024 as new lot creation is not permitted within habitat of endangered or threatened species in accordance with Provincial and Federal requirements. To ensure there are no endangered or threatened species located on the subject property, Planning staff recommends that the applicant complete a Species At Risk Study in accordance with the City's Official Plan policies before any of the existing trees are removed and before the existing dwelling on the property is demolished. Planning staff also recommends that mitigation measures recommended in the Species At Risk Study, if any, be addressed in a development agreement.

Staff recommend that an additional condition be imposed to require that a Landscape Plan, including a Tree Preservation Plan, prepared by a qualified Landscape Architect to be peer reviewed by the City's independent third-party Landscape Architect at the expense of the applicant, be developed to the City's satisfaction with the provision of 1 tree per lot with a minimum 80mm caliper at Diameter at Breast Height (to be measured at a point 1.37 metres above the ground at the base of the tree) with each tree to be located on private property within the Front Yard of the Lot and the species of the trees to be Sugar Maple or Red/White Oak. Staff recommends that securities for the preservation of existing boundary trees and planting of new trees (to be shown on the Landscape Plan and associated Tree Preservation Plan) be taken through the development agreement to ensure adequate protection of existing boundary trees and ensuring that replacement trees will be planted.

Site Servicing Plans

The installation of water and sanitary laterals will be required and will be required to be shown on a Site Servicing Plan prepared by an experienced civil engineer. The Site Servicing Plans will also be required to include the road restoration details to the satisfaction of the City.

Engineering staff in the Development Services and Engineering Department have confirmed there are no capacity concerns with respect to water and wastewater capacity in the conveyancing system within the vicinity of this subject property. As such, it is not recommended that the applicant prepare a Functional Servicing Report for this consent application, at this time.

Driveway Design:

First Street has not been constructed with curb and gutter; rather open ditches convey stormwater. An Entrance Analysis, prepared by a qualified professional, together with the associated Lot Grading Plan, prepared by an experienced civil engineer, must ensure that the proposed driveways on the subject property will:

- Ensure driveway grades and design conform to the City's Engineering Design Criteria;
- Ensure the existing driveway is properly decommissioned; and,
- Ensure the proposed driveways will be grouped to conform to Policy 3.3.7.4.2 f) of the City's Official Plan, while at the same time demonstrating that the proposed downspouts will be directed to pervious surfaces to prevent icing on the municipal road.

Construction Management Plan:

Often infill development cause off-site impacts on neighbouring properties during construction and it is typical with any infill development to require the applicant to prepare a Construction Management Plan to the City's satisfaction to ensure the applicant has a plan for the parking of construction vehicles, the storage of construction materials, etc. to

ensure off-site impacts to the surrounding neighbourhood is minimized. Given this proposed infill development is an internal lot (with abutting properties on either side), staff is of the opinion that a Construction Management Plan would be most appropriate to manage potential impacts of construction.

High Groundwater Potential:

Engineering staff will require a Geotechnical Report be prepared to confirm the groundwater elevation to determine whether or not the proposed development ought to be constructed with basements in accordance with the City's Engineering Design Criteria. The Report shall be prepared and stamped by a qualified professional engineer. The Report will be required to address the requirements identified within the City of Orillia Engineering Design Criteria manual. If the Geotechnical Investigation is conducted outside of the anticipated seasonal high groundwater level (March to June), the City may request a Hydrogeotechnical investigation be conducted to document the seasonal high groundwater levels.

Plan of Subdivision vs. Consent

Both the *Planning Act* and the City's Official Plan require the municipality to consider whether a proposed development needs a Plan of Subdivision to ensure proper and orderly development of the lands. When the municipality has determined that a Plan of Subdivision is not required for the orderly and proper development of lands, then a Consent application process can be pursued.

After various staff from the Environment and Infrastructure Services and Development Services and Engineering Departments from the City undertook site inspections of the subject property and surrounding neighbourhood in completing due diligence on the review of the Consent application submitted by the applicant, the following plans and studies are recommended to be completed:

1. Stormwater Management Report
2. Lot Grading Plan together with stamped engineered drawings of Retaining Walls prepared by a structural engineer (if required)
3. Erosion Sediment Control Plan
4. Site Servicing Plan
5. Construction Management Plan
6. Landscape Plan
7. Tree Preservation Plan
8. Species At Risk Study
9. Entrance Analysis
10. Geotechnical Report together with a Hydrogeotechnical Investigation (if required)

Based on staff comments submitted at the time of writing this report, a minimum of 10 different plans and studies are recommended to be completed to ensure the proposed

development will result in good land use planning. With a consent application, these plans and studies must be prepared, reviewed, and approved within two years of the Committee of Adjustment granting Provisional Consent otherwise the Consent approval will lapse and the applicant will need to apply to the Committee of Adjustment for approval once again if the applicant wishes to continue with the proposed development.

However, with a Plan of Subdivision preconsultation is strongly recommended (which most applicants choose to pursue) and all of the required plans and studies are prepared before the Plan of Subdivision application is deemed complete by City staff. Once Council grants approval of the Draft Plan of Subdivision, then the applicant has up to 3 years to fulfill the conditions of approval before needing to seek a Draft Plan Approval extension from Council.

Conclusion:

Staff withdraws the recommendation for approval of this application contained in the staff report dated May 12, 2026 (which was written before any site inspections took place) and now recommends deferral for the reasons set out above under “Recommendation”.

The Committee will need to determine whether an in-person or virtual format is appropriate. Once that determination has been made, a future hearing date can be set. Notice will be recirculated prior to the future hearing in accordance with the *Planning Act* and regulations.

Should the Committee vote to approve the application on June 22, 2026, it is recommended that the conditions set out on Schedule “A” be imposed with reasons for approval to be determined by the Committee.

Senior Planner

Schedule "A" – Conditions of Approval

1. That the Owner/Applicant arrange for all taxes, local improvements, and/or other charges, both current and in arrears be paid prior to issuing of the Certificate of Consent, for the calendar year to the satisfaction of the Treasurer/Chief Financial Officer;
2. The Owner/Applicant shall submit to the Secretary Treasurer of the Committee of Adjustment a draft reference plan of survey which sets out the lands which are the subject of this application for review. Once duly deposited with the Office of the Land Registrar, an electronic copy is to be provided;
3. The Owner/Applicant shall submit to the Secretary Treasurer of the Committee of Adjustment draft Transfers for review. (Upon registration, final copies of the Transfers shall be provided to the City);
4. That the Owner/Applicant shall be required to pay the Development Review Fee (\$75.00) as approved by City Council.
5. That the Owner/Applicant shall pay to the City of Orillia Cash-In-Lieu of Parkland dedication the amount of which shall be in accordance with City Policy 8.1.2.1, to the satisfaction of the Secretary-Treasurer.
6. That the Owner/Applicant shall prepare a Site Servicing Plan, prepared by an experienced civil engineer, which includes road restoration details on the Plan, and enter into a Lateral Service Agreement with the City for the design and installation of water and sanitary service laterals to the front property line of the retained and the three (3) new lots at the expense of the applicant and to the satisfaction of the City.
7. That the Owner/Applicant shall demolish the existing buildings and structures on the property, at the expense of the Owner/Applicant, with all necessary permits and approvals, to the satisfaction of the City.
8. That the Owner/Applicant prepare a Species At Risk Study, to the satisfaction of the City, prior to the removal of any vegetation or structures on the property.
9. That the Owner/Applicant shall enter into a Consent Agreement with the City to include:
 - a. the design and installation of water and sanitary service laterals to the front property line on the severed and retained lots at the expense of the applicant, to the satisfaction of the City. The installation of services must be installed and inspected to the satisfaction of the City prior to the lapsing of Conditional Consent Approval;

- b. development of the property shall be in accordance with the required Entrance Analysis, Stormwater Management Plan, Geotechnical Report, Hydrogeological Investigation (if required), Lot Grading Plan, Site Servicing Plan, Construction Management Plan, Erosion Sediment Control Plan, Landscape Plan and Tree Preservation Plan to the satisfaction of the City;
 - c. the implementation of any mitigation measures recommended by the Species At Risk Study; and
 - d. provision of securities by the applicant to ensure completion of all of the works required under the Consent Agreement.
10. That the Owner/Applicant shall submit an Entrance Analysis, prepared by a qualified professional, to the satisfaction of the City, including a plan to decommission the existing driveway and a plan to group the driveways for the Semi-Detached Dwellings to conform to Policy 3.3.7.4.2 f) of the City's Official Plan, while at the same time demonstrating that the proposed downspouts will be directed to pervious surfaces to prevent icing on the municipal road, and that the Owner/Applicant submit an Undertaking confirming the said driveway design included in the Entrance Analysis will be submitted for their future building permit applications.
11. That the Owner/Applicant shall submit a Stormwater Management Plan, Lot Grading Plan and Erosion and Sediment Control Plan, prepared by an experienced civil engineer, to the satisfaction of the City. The Owner/Applicant shall submit Retaining Wall designs prepared and stamped by a qualified professional engineer experienced in structural engineering, if deemed to be required as a result of the City's review of the proposed Lot Grading Plan.
12. That the Owner/Applicant shall submit a Landscape Plan, including a Tree Preservation Plan, to be prepared by qualified Landscape Architect and to be peer reviewed by the City's third-party independent peer review Landscape Architect to the satisfaction of the City with the provision of 1 tree per lot with a minimum 80mm caliper at Diameter at Breast Height (to be measured at a point 1.37 metres above the ground at the base of the tree) with each tree to be located on private property within the Front Yard of the Lot and the species of the trees to be Sugar Maple or Red/White Oak.
13. That the Owner/Applicant shall prepare a Construction Management Plan to the satisfaction of the City to minimize off-site impacts of construction on the surrounding neighbourhood.
14. That the Owner/Applicant shall prepare a Geotechnical Report (that has been prepared and stamped by a qualified professional engineer) to confirm the water elevation of the groundwater. The Geotechnical Report will be required to address the requirements identified within the City of Orillia Engineering Design Criteria

manual. If the Geotechnical Investigation is conducted outside of the anticipated seasonal high groundwater level (March to June), the City may require a Hydrogeotechnical investigation be conducted to document the seasonal high groundwater levels. Any mitigation measures recommended in the said reports will be addressed in the Consent Agreement to implement conditions on development, if required, to the City's satisfaction.

Formal Notice of Objection: Procedural Fairness and Accessibility

Date: May 6, 2026

To: *The Committee of Adjustment*

Cc: Mayor Don McIsaac

Cc: Councillor Tim Lauer

Cc: Councillor Janet Durnford

Re: Proposed Land Severance – 16 First St.

This letter serves as a formal objection to the format of the upcoming hearing regarding 16 First St. We are writing to state that the decision to hold this meeting exclusively via Zoom is procedurally unfair and discriminatory toward the residents of First Street.

We believe this format is prejudicial for the following reasons:

- **Constructive Exclusion:** By requiring a level of digital literacy and access to specific technology that many residents do not possess, the Committee is effectively excluding them from a democratic process. This creates a "barrier to entry" that inherently favors those with technical skills while silencing those without.
- **Age and Ability Discrimination:** Many long-term residents in this neighbourhood are seniors. Forcing participation through complex digital codes and virtual platforms—even via telephone—constitutes a failure to provide reasonable accommodation. It is a known reality that these barriers prevent elderly citizens from exercising their right to speak on matters that directly impact their property and community.
- **Impairment of Rights:** The right to a fair hearing includes the right to be heard effectively. A resident who cannot navigate a Zoom lobby or enter a multi-digit passcode is being denied their voice. This is not a matter of "convenience," but a matter of prejudice against a specific demographic of the population.

Our Request: To remedy this unfairness, we request that the Committee provide a physical, in-person hearing. Procedural fairness requires that all stakeholders have an equal opportunity to participate. As it stands, the current format provides a clear advantage to the applicant while placing the affected neighbours at a significant disadvantage.

We trust the Committee will recognize this imbalance and act to ensure the hearing is accessible to everyone, not just those with computer access.

Sincerely,

On behalf of the Residents of First Street

Subject: 16 First Street Orillia

Hello,

I hope this email finds you well, it has been brought to my attention about some development proposal at 16 First st. We unfortunately were not made aware of the potential development on our street and I am told there is a letter being signed in our community that I am unable to sign as I am away until May 12th. I would like to kindly ask that the meeting type be reconsidered from being held on Zoom to an in person hearing as well the hearing be postponed to allow us better preparation again as we never received a letter and were unaware of this until a couple of days ago.

Mitchell Bull
28 First St, Orillia

To: The Committee of Adjustment
May 7, 2026

We, the undersigned, are asking for a rescheduling of the meeting of May 20th to discuss the application B04-26.

Some of us received the notice May 1st. Others did not receive it until May 4th. At least one person is still waiting for their notice - they live directly across the street. As such our notice does not satisfy the "at least fourteen days notice" that is necessary for a proposed consent meeting. This proposal is very important to us as homeowners in the area around 16 First St. We are not being provided sufficient time for us to investigate the proposal and to prepare our statements for this meeting.

We also feel that the members of the Committee of Adjustment need to be provided sufficient time to explore this proposal not just from the point of view of the applicant but also of the neighbours who would be MOST greatly affected if consent is given for the proposed changes. We sincerely hope that if more time is allotted then the committee members will have a chance to visit the neighbourhood, talk to the residents and see how the proposed changes would negatively affect the neighbourhood.

Additionally, we would like to have time to consult with our councillors and our mayor. They are our representatives and we want to meet with them and have their help explaining the bylaws involved in this proposal and the possible long term repercussions of the additional lots and dwellings that our proposed.

Also, the matter of working people needs to be addressed. To attend this meeting would mean having to miss work for some residents. This is not treating people fairly and equitably. An evening meeting would be more inclusive to those who work days.

Addressing the matter of inclusivity means also addressing those who do not have computers and have hearing issues. A zoom meeting would be a very unfair way of allowing them to be part of the meeting. This is definitely not building an inclusive and equitable society for all in Orillia. Providing a day zoom meeting is a discriminatory act against the hearing impaired, the working person, and those who choose not to have computers. This is an action that cannot be supported.

If you feel the need to discuss our request with one representative, contact one of the first names on the petition.

Sincerely,

Subject: Regulations on demolishing an existing home

Email Sent By: <>

A notice of severance was delivered to my residence (13 First Street) regarding a proposed severance of 16 First Street. There is a legal duplex that was recently renovated on the property now. Is there an issue with demolishing a dwelling that is available for use now in favour of a new construction with a proposed 4 unit structure? Any information you can provide would be greatly appreciated. Our neighbourhood is united in opposition to the proposed severance for many reasons and are going to discuss the issues at an upcoming hearing.

Subject: COMMENTS FROM ANNE WAGGONER JUNE 12 2026 - OBJECTING TO
TIME OF IN-PERSON HEARING 16 First St

Good afternoon

O am writing to protest the failure to make the in person meeting an evening meeting for those who work. We included in our initial petition how a day time meeting is not inclusive to those who work. It is discriminatory towards them- very exclusive. When the committee made their decision to change to an in person meeting they did not co sided this at all. Two of the people who signed the petition do work days. This is not fair. They do not have an agent to speak for them. They have a right to listen to the discussion and participate directly as tax payers in this community who will be directly affected by the proposed severances and concomitant development.

Sincerely

Anne Waggoner

Subject: COMMENTS ANNE WAGGONER JUNE 19 2026 - Submission for the Committee of Adjustment

Hello

this is just a summary of some of the concerns I wanted to have addressed at the meeting Monday morning. I would also like the opportunity to speak. I read the new update submitted by the planning department and am thankful for how thorough it is.

Thank you

The backyard at 20 First Street floods every spring. How will the building of higher density structures and developing the land to allow the new structures affect the already existing problem?

Are there any guarantees that the building of new units so much closer to my property line, not damage the existing trees there.

If the land is made higher than my yard, where will the rainwater and melting snow go? How can the present conditions be guaranteed?

The street has no sidewalks and is not overly wide. There are significant ditches in front of 20 First St. How will the additional parking on the street (from more visitors) affect the safety of pedestrians?

The street is a small road and not on any bus route. Hence it is a street that does not get cleaned of snow until all the bus routes and arterial roads are finished. How will the extra traffic affect the conditions of the roads as snow is packed down and becomes rutted very quickly as it is?

A statement from the Official Plan: "It is the intent of this plan to ensure that the areas designated stable neighborhood as identified on schedule a are protected from incompatible forms of development and at the same time be permitted to evolve and be enhanced over time. ALL new development shall be compatible with its surrounding context and shall conform with the design policies for a given area."

With the construction of multiple dwellings on 4 lots which will be considerably different from the surrounding homes, how can this part of the Official Plan be satisfactorily upheld?

Four lots with its necessary parking and development will have little land available for recreation by the residents. The city is recommending the developer pay funds in lieu of

parkland. This means the new residents which will most likely involve families have nowhere to play. How can the safety of new residents in this situation be guaranteed?

Having a conversation with the secretary of our premier and viewing past releases, I did not get the impression that the province was trying to uniformly force four plexes in stable neighbourhoods. I think our city needs to consider how the push for intensification looks in each of our different stable neighbourhoods. Personally, I think the allowance of four lots and sixteen dwellings in this particular area is going to change the nature of this stable neighbourhood. It will no longer be stable. It will change the entire nature of this area as other developers will be looking to do the same thing. There will be an intensification but no infrastructures of sidewalks to support it.

Application Number: B04-26
Letter of Concern Regarding 16 First Street Development.

Dear Lorrie Jackson and Committee,

We are writing a letter to share our concerns about the proposed development at 16 First Street. As adjacent neighbours at 12 First Street, we are bringing forward a list of concerns and the impacts that this development will have on our property and the Poplar Subdivision.

Concerns:

- *Storm Water Management*
 - As the lowest point in our subdivision, at 12 First Street, we are concerned that with this development there will be increased issues with storm water drainage. With heavy rainfall, we accumulate the water drainage from all properties in the Poplar Subdivision. The easement flows towards Laclie Street, resulting in flooding in our basement. The water also accumulates in the ditch on Laclie Street behind our property, not reaching the City of Orillia Drains. With this new development, questions and issues arise about infrastructure and how this impacts our property.
- *Replacement of Break Wall*
 - The property in question, 16 First Street, has a break wall separating the two properties. At this point in time, the break wall is compromised. With cracks and a slant, the break wall separating our properties is a risk to all parties.
- *Property Water Drainage*
 - Water from 16 First Street drains through the compromised break wall and into our property. This contributes to flooding and pooling of water.
- *Parking*
 - With the nearest public school being 800 metres from the property, our street is a high foot traffic area for students and families walking to and from school. Increasing the amount of parking for the proposed development increases vehicular traffic, putting these families and children at a greater risk. Street and overnight parking would also contribute to poor visibility and increased risk.
- *Snow Removal*
 - During the winter months, our street is not a high priority for snow removal. Each winter, our street turns into one lane due to the lack of plowing and efficient work. Increasing the lot amount by 4 times, increases the number of occupants on our street and the risk of vehicular accidents, especially in the winter months. In regards to snow removal on the property of 16 First Street, questions arise about where the snow will be placed.

- *Height Restriction*
 - With the proposed development, there are concerns that the developer may propose a motion to increase the height restriction to increase the number of occupants on the property.
- *Green Space*
 - With this development, there are concerns about the Green space, or lack thereof. The question arises of whether or not this development will meet the required amount of greenspace in the City of Orillia.

Thanking you in advance for these considerations,
Stewart and Janey Thompson
12 First Street, Orillia
